New Innovation in Compressible Technology

The new Response—it's what happens when sheetfed printers tell us what they need and it's what you can expect from the newest innovation in compressible technology. Introducing the new Vulcan® Response™ from Reeves Brothers, Inc. The newest compressible blanket for high-speed sheetfed commercial printers.

Enhanced Compressible Layer

The Vulcan Response's compressible layer is thicker than other competitive blankets. Its proprietary construction reduces "bulge" or blanket displacement for truer reproduction, less plate wear, and shorter make-ready times.

Excellent Smash Resistance

With its newly enhanced compressible layer, the new Vulcan Response is more resistant to severe smashes. It features a controlled composition that, when combined with its specially formulated, low-compression-set surface, rebounds instantly (even at the highest speeds) for consistent top-notch performance.

Minimal Dot Gain

Specifically engineered for high-speed sheetfed presses, the new Vulcan Response combines rugged mechanical strength with the highest standards in print quality. Its precision-controlled profile produces full solids, minimal dot gain, and rich contrasts.

Greater Resistance

Even with high speeds and constant pressures, this new blanket's proprietary rubber face resists cuts and abrasions. It not only prints better—it prints longer. Plus, it resists solvents, additives, and other liquids that are commonly used in your make-ready.

Technical Specifications

Description: New compressible blanket that offers greatest resistance against smashes. Features new patented compressible layer that makes it ideal for sheetfed commercial printers.

Face: Liberty Green

Surface: Buffed

Available Thicknesses:
.077" ± .001"

Face Compound: Solvent-Resistant Rubber Blend

Fabric Backing: Water and Solvent Proof

Micro Hardness: 70° (typical)
